

Nathan Santos

FULL STACK DEVELOPER

Sorocaba, Brazil | nathan.rgs@gmail.com | +55 15 99741-1076 |

LinkedIn: | https://www.linkedin.com/in/nathan-rgs/ | **Portfolio:** | https://nathan-rgs.vercel.app/

PROFESSIONAL SUMMARY

Detail-oriented Full Stack Developer with a Computer Engineering background and international software development experience in Germany. Builds scalable web products with TypeScript, Node.js, React, Vue.js, and modern API architectures, with strong attention to interface quality, reliability, and maintainability.

TypeScript | Node.js | React | Vue.js | NestJS | PostgreSQL

CORE STRENGTHS

Product delivery: production-ready front-end and full-stack execution

Architecture: scalable APIs, data modeling, and system integration

Collaboration: code review, design systems, and agile teamwork

PROFESSIONAL EXPERIENCE

Full Stack Developer

Aug 2024 - Present
Remote, Brazil

OMIE

- **Improved front-end delivery speed by ~15%.** Did this by turning product and UI requirements into reusable Vue.js components and scalable implementation patterns across CRM flows.
- **Increased CRM stability and supported faster iteration cycles.** Refined JavaScript-based interfaces in ways that reduced rework and made product adjustments easier to ship.
- **Helped reduce integration issues across multiple features.** Worked with back-end engineers to connect APIs and services with more predictable data flows and smoother user experiences.
- **Expanded component reuse across several product journeys.** Contributed to shared design-system repositories and applied more consistent UI patterns in day-to-day delivery.
- **Improved team-level code quality and release confidence.** Used JavaScript, Vue.js, GitHub reviews, and agile collaboration practices in a highly iterative environment.

Full Stack Developer

Feb 2024 - Aug 2024
Sorocaba, Brazil

Epiousion IT

- **Increased API delivery reliability.** Led back-end development with Node.js, NestJS, and TypeScript, structuring services to support scalable feature growth.
- **Improved data consistency and reduced maintenance overhead.** Built structured access layers with TypeORM and Prisma ORM using clearer contracts between business logic and storage.
- **Shortened end-to-end implementation time by ~20%.** Delivered full-stack features with React and Tailwind while keeping front-end and back-end decisions aligned from the start.
- **Supported more stable feature releases.** Worked across PostgreSQL, SQL Server, and MongoDB with data models designed for predictable queries, cleaner integrations, and easier evolution over time.

Software Developer for Cloud Computing

Jan 2023 - Jan 2024
Aachen, Germany

Fraunhofer Institute for Production Technology

- **Improved usability for cloud-based simulation workflows.** Built React and TypeScript interfaces with MUI that made technical operations easier to navigate and execute.
- **Reduced manual handling in simulation routines.** Developed Python microservices with parameter validation and CRUD flows, helping engineering teams run processes more consistently.
- **Improved integration reliability across cloud services.** Connected microservices and consolidated outputs into structured HDF formats that were easier to store, inspect, and reuse.
- **Increased analysis readiness for manufacturing datasets.** Processed aircraft-engine milling data with LabVIEW, DIAdem, and GraphQL to support clearer downstream interpretation.

Web Development Intern

May 2021 - Dec 2022
Sorocaba, Brazil

Huawei

- **Improved delivery consistency across websites and internal systems.** Built front-end features with JavaScript, Vue.js, HTML, and CSS using reusable implementation patterns.
- **Reduced layout rework and strengthened user experience.** Implemented responsive interfaces with a consistent focus on usability, performance, and visual quality.
- **Supported more reliable data-driven features.** Collaborated on SQL-backed implementations and aligned interface behavior with underlying business data.

EARLIER EXPERIENCE

Mechatronics Technician

Jan 2020 - May 2021
Sorocaba, Brazil

VCP Industrial Automation

- **Improved day-to-day operational continuity.** Supported software and hardware environments in ways that reduced interruptions and kept internal teams productive.
- **Increased documentation reliability and internal access to information.** Maintained websites and technical materials with a stronger focus on clarity and ongoing usability.
- **Supported multidisciplinary automation projects more effectively.** Designed mechanical components with CAD tools and improved coordination between technical areas.

EDUCATION

Computer Engineering

Facens - Sorocaba University of Engineering | Jan 2020 - Dec 2025 | Sorocaba, Brazil

Mechatronics Technician

SENAI | Jan 2017 - Dec 2019 | Sorocaba, Brazil

English Studies

Wizard by Pearson | Jan 2011 - Dec 2017 | Sorocaba, Brazil

TECHNICAL SKILLS

Front-end	React, Vue.js, JavaScript, TypeScript, HTML, CSS, Tailwind, MUI
Back-end	Node.js, NestJS, Express, Prisma ORM, TypeORM, API integration
Data	PostgreSQL, SQL Server, MongoDB, SQL, database modeling
Workflow	Git, GitHub, Postman, Insomnia, clean code, agile collaboration
Other	Python, cloud computing, systems integration, simulation automation

PROFESSIONAL PROFILE

Working style: autonomous, versatile, and self-taught in acquiring new knowledge.

Quality focus: maintainable code, interface consistency, and dependable user-facing behavior.

Strength in teams: cross-functional collaboration, delivery ownership, and clear technical communication.
